

Site dust reductions at Cement Australia – We have sealed roads!

Cement Australia has sealed a number of dirt roads, apron areas around buildings and the staff car park with “spray seal” bitumen. “Spray seal” was chosen as it is much less expensive to lay than either asphalt or concrete so more dirt roads could be sealed and thus the most benefit gained from the \$80,000 allocated for this project.

The sealing of 2.5 kilometres of dirt roads and other high traffic areas has not only significantly reduced the dust created by site traffic but has made a huge difference to the appearance of the site.
